Career Objective

I'm in the midst of retraining myself now. I'm learning to work collaboratively. I am a hard working person with a creative mind and always willing to learn new skills. I am friendly, helpful, polite, have a good sense of humor. I am able to work independently and also within a team. I want to build my career as a "Front-End web developer" and focus on "Full stack web developer" in the future.

Self-Assessment

- Self-starter with ability to multitask
- Ability to make decision in any situation.
- Good communication skill. And quick learner.
- Effective communication, interpersonal and negotiation skills

Skills

- HTML
- CSS
- Bootstrap
- JavaScript
- jQuery
- ReactJS (learning)

Project:

- **Blog Publication and Portfolio Management System (On Going)**

  - ➢ I am working on a project that is very important for my learning and software skills. My friend has developed the Back-End while I will design the **Front-End** section. However, the project isn't ready for hosting as the name is not final and there are more functionalities that must be added like the 'Comments section', 'API', 'Email subscription', etc. On top of this I need to clean the codes and add my portfolio so the final project will be a web-based blog and video publications application along with my portfolio after testing. Our team name is "DevsCave".

- **Distributive food service (On Going)**

  - ➢ This is an open source web application for ordering homemade food cooked by housewives. Where I am developing **"Front-End"** section. This system will be based on the smartphone app in the future. It'll be also based on distributive architecture like Uber. We just developed the web version for a demo. It's my personal project maintaining by our team named 'DevsCave'. This application will be very helpful for the students of Dhaka city who are living outside from home and don't able to consume homemade food.
